

NOMAN MAHMOOD

Associate Data Engineer

📍 Lahore, Pakistan 📞 0309-7932730 ✉ nomanmahmood730@gmail.com 🔗 [LinkedIn](#) 📁 [Portfolio](#) 🐙 [GitHub](#)

SUMMARY

Fast-learning Cloud Data Engineer with practical project experience building automation pipelines **using GCP services, including BigQuery, Pub/Sub, Dataflow, and dbt**. A self-driven developer who requires minimal training and supervision to start contributing. Focused on optimizing query performance and reducing cloud costs to deliver immediate value to the team from day one.

TECHNICAL SKILLS

Languages & Core CS — Python, SQL, OOP, DSA, REST APIs

Python Libraries — Pandas, NumPy, PyArrow, Requests, BeautifulSoup4, Scikit-learn, Seaborn, Pytest

Google Cloud Platform — BigQuery, Dataflow, Apache Beam, Pub/Sub, Cloud Storage, Cloud Composer, AI-Driven Data Pipelines

Data Engineering & Design — System Design, Data Warehousing, Data Lakehouse Architecture, Relational Databases

Infrastructure & Automation — dbt, Terraform, Docker, Git, GitHub Actions

PROJECTS

Crypto Whale Analytics Pipeline — BigQuery, dbt, Python, SQL, Docker, GitHub Actions

Self-Project / Independent Developer | Oct 2025 – Dec 2025

[Case Study](#) [GitHub Repository](#)

- Architected a high-throughput pipeline to process 500+ GB of crypto transaction data, achieving a 40% reduction in query latency through partitioning and clustering.
- Used dbt to structure clean data layers (staging, intermediate, marts), enabling 100% automated data quality testing via CI/CD.
- Automated end-to-end infrastructure deployment using Docker and GitHub Actions, reducing manual configuration time by 90%.

E-Commerce Clickstream Pipeline — Pub/Sub, Dataflow, Apache Beam, BigQuery, Python

Self-Project / Independent Developer | Jan 2026 – Mar 2026

[Case Study](#) [GitHub Repository](#)

- Engineered a real-time streaming pipeline capable of processing 10,000+ events/hour with sub-2-second latency.
- Provisioned cloud infrastructure using Terraform to ensure 99% uptime for the event-generation service.
- Implemented sliding and tumbling window transformations in Apache Beam, ensuring 0% data loss during high-velocity traffic spikes.

Final Year Project: NoCodeNexus — Python, React, REST APIs

UET Lahore | Sept 2025 – May 2026

[GitHub Repository](#)

- Built a UI-based preprocessing platform that reduces manual data cleaning time by 70% for non-technical users.
- Enabled processing of 100,000+ rows of data without code using an integrated Python backend and React frontend.
- Standardized data workflows for 5+ distinct user personas, ensuring 100% consistency in data output.

EDUCATION

Bachelor of Science in Computer Science

UET, Lahore

Sep 2022 – Jun 2026 | Lahore

CERTIFICATES

- **Associate Data Engineer** | DataCamp — Mar 2026 | [Certificate](#)
- **Data Analytics Professional Certificate** | Google — July 2025 | [Certificate](#)
- **Power BI Data Analyst Professional** | Microsoft — Aug 2024 | [Certificate](#)
- **Google Cloud Platform (GCP) Data Engineering Stack** | Coursera — In Progress
- **Advanced SQL for Data Manipulation & Python Data Pipelines** | DataCamp — Result 70% above
